How do
task variety
and
interpersonal relationships
influence *performance*?

A person with a red backpack is walking on a suspension bridge that spans a deep, dense forest. The bridge is made of metal cables and a mesh floor. The person is seen from behind, looking towards the distant, misty mountains. The forest is lush and green, covering the steep slopes of the mountains. The sky is hazy, suggesting a misty or early morning atmosphere. A dark horizontal bar is overlaid on the left side of the image, containing the word 'Introduction' in white serif font.

Introduction

Definitions

A **workplace** is composed of **agents** which must perform a series of **tasks**.

Each **agent** possesses a **skillset**: here, their *expertise* and *motivation* for each **skill** is recorded.

Each **task** is composed of a series of **actions**.

Each **action** requires exactly one **skill**.

Definitions

What is task variety?

A measure for the **variety of the skills** associated with the collection of actions.

High task variety means that many actions will require the frequent activation of different sets of skills by the intervening agents (= a lot of context switching).

Definitions

Example

Low task variety

- Pluck peaches
- Put them in a box
- Sell them

1

- Pluck peaches
- Put them in a box
- Ship them

2

High task variety

- Pluck peaches
- Put them in a box
- Sell them

1

- Pluck peaches
- Buy other ingredients
- Make jam

2

Definitions

What is group performance?

Group performance is determined by two factors:

- the time taken by the agents to perform the tasks;
- the *coordination time*, i.e., the time taken by the agents to distribute tasks between themselves.

Group performance depends on the designated tasks.

How do
task variety
and
interpersonal relationships
influence *performance*?

What about **interpersonal relationships**?

Analysts

"ARCHITECT"
INTJ (-A/-T)

Imaginative and strategic thinkers, with a plan for everything.

"LOGICIAN"
INTP (-A/-T)

Innovative inventors with an unquenchable thirst for knowledge.

"COMMANDER"
ENTJ (-A/-T)

Bold, imaginative and strong-willed leaders, always finding a way - or making one.

"DEBATER"
ENTP (-A/-T)

Smart and curious thinkers who cannot resist an intellectual challenge.

Sentinels

"LOGISTICIAN"
ISTJ (-A/-T)

Practical and fact-minded individuals, whose reliability cannot be doubted.

"DEFENDER"
ISFJ (-A/-T)

Very dedicated and warm protectors, always ready to defend their loved ones.

"EXECUTIVE"
ESTJ (-A/-T)

Excellent administrators, unsurpassed at managing things - or people.

"CONSUL"
ESFJ (-A/-T)

Extraordinarily caring, social and popular people, always eager to help.

Diplomats

"ADVOCATE"
INFJ (-A/-T)

Quiet and mystical, yet very inspiring and tireless idealists.

"MEDIATOR"
INFP (-A/-T)

Poetic, kind and altruistic people, always eager to help a good cause.

"PROTAGONIST"
ENFJ (-A/-T)

Charismatic and inspiring leaders, able to mesmerize their listeners.

"CAMPAIGNER"
ENFP (-A/-T)

Enthusiastic, creative and sociable free spirits, who can always find a reason to smile.

Explorers

"VIRTUOSO"
ISTP (-A/-T)

Bold and practical experimenters, masters of all kinds of tools.

"ADVENTURER"
ISFP (-A/-T)

Flexible and charming artists, always ready to explore and experience something new.

"ENTREPRENEUR"
ESTP (-A/-T)

Smart, energetic and very perceptive people, who truly enjoy living on the edge.

"ENTERTAINER"
ESFP (-A/-T)

Spontaneous, energetic and enthusiastic people - life is never boring around them.

Main Contributions

(1) Resurrection of WORKMATE-I

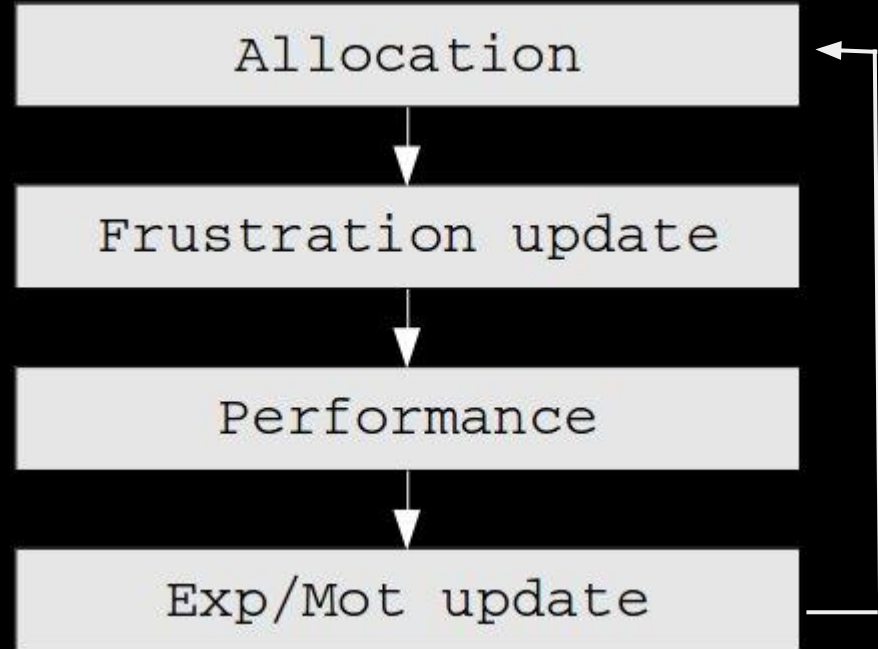

- Delphi6 → Python3
- Object-oriented
- Incorporation of plotting libraries

(2) Modelling frustration/happiness related to work environment

(3) Linking two areas of research

- Task allocation and group performance
- Personality models

Model

Tasks

- Several cycles
- Several actions per cycle
- One skill per action

Agents: dimensions

- Per skill
 - Expertise
 - Motivation
- Per agent
 - Frustration
 - MBTI

Agents: interactions

$$I_2 := I_2 - i \cdot I_1 I_2 | I_1 - I_2 |$$

$$Y_2 := Y_2 - i \cdot Y_1 Y_2 | Y_1 - Y_2 |$$

$$Y_2 := Y_2 + \varepsilon \cdot (1 - Y_2) I_1 | I_1 - I_2 |$$

$$I_2 := I_2 + \varepsilon \cdot (1 - I_2) Y_1 | Y_1 - Y_2 |$$

Agents: mood

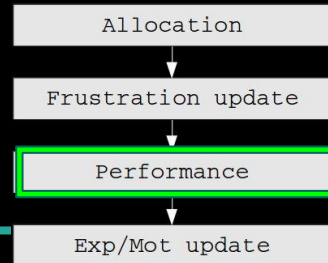

$$f_{t+1} := 0.8f_t + 0.2I(T, r_{ij})$$

$$I(T, r_{ij}) = I_{max} \left(1 - e^{-\beta \frac{1-r_{ij}}{r_{ij}} \frac{\mathfrak{T} / \mathfrak{T}_{max}}{1 - \mathfrak{T} / \mathfrak{T}_{max}}} \right)$$

Agents: performance

$$t_{perf_a} = \sum_{i=1}^{N_{actions}} \frac{t_{action_i}}{\alpha_e \frac{e_i}{e_{max}} + \alpha_m \frac{m_i}{m_{max}} + \alpha_f \frac{1-f}{f_{max}}}$$

$$T_{perf} = max\{t_{perf_1}, ..., t_{perf_n}\} + T_{coordination}$$

Agents: expertise & motivation

$$p_{t+1} = p_t + \lambda_p \frac{p_{max} - p_t}{p_{max}}$$

$$p_{t+1} = \frac{(p_t - \mu_p)p_{max}}{p_{max} - \mu_p}$$

Implementation

Simulator as a 'Black Box'

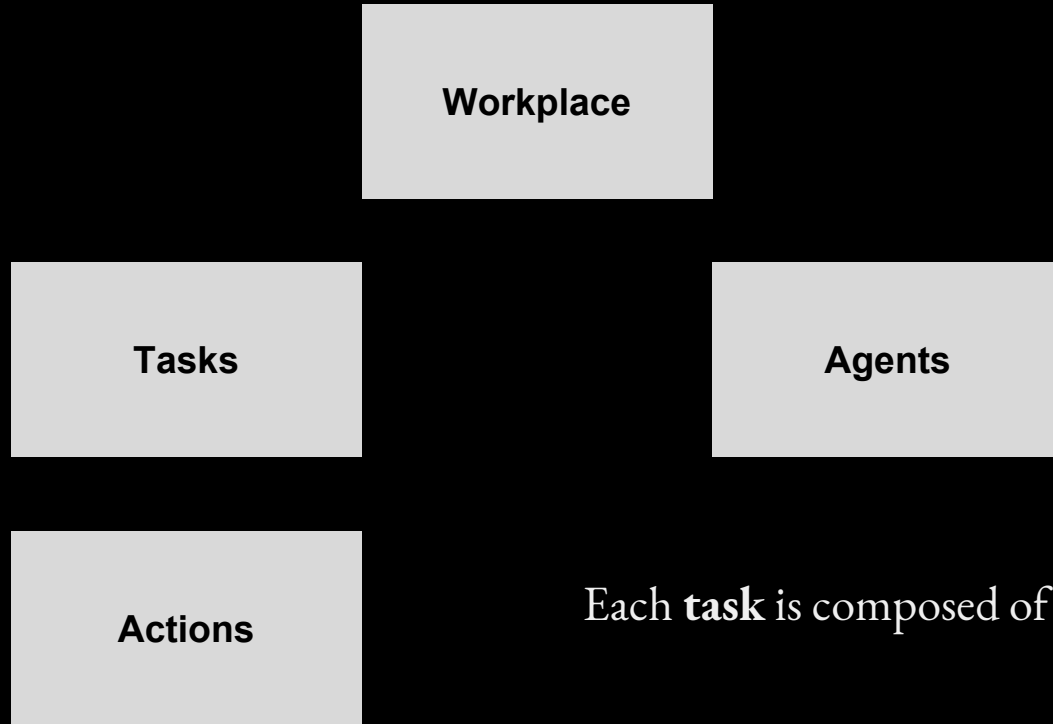

Class Diagram

Good relationship

Specialization smooths
out conflicts...

Specialization smooths
out conflicts...

... if there is a ‘routine’

Conclusions

Conclusions

Replicated results from bibliography in a modern and adaptable form.

Expanded the model to include a measure of frustration in agents.

Incorporated the nuanced nature of interpersonal relationships in the model.

Limitations

Absence of randomness.

Parameters were determined empirically.

No complex tasks and dependencies.

Future Work

Include a greater number of agents at the expense of complexity.

Group Formation: allow agents to join/leave a workplace → stable arrangement?

Different personality models: Belbin Team Roles? → more work-oriented
